

Case Study

Financial Alliance adopts Network Box solution.

Financial Alliance is Singapore's leading and award-winning Financial Advisory Firm.

We offer our individual and corporate clients a unique, unbiased and meaningful one-stop experience in financial advisory services. Our wide range of wealth management and financial planning solutions is second to none.

Our entire team shares a pro-client outlook, and our corporate infrastructure is designed to reflect this. We are proud of our uncompromising stand on competence and professionalism.

Over 50,000 clients reap tremendous value and achieve peace of mind from our financial advice that is specifically aligned to their needs and goals.

“The responsibility of keeping our networks protected was weighing heavier and heavier onto the shoulders of our IT Department, as the time and effort to update, maintain and remediate problems became more complex over the years. However, since the installation of the cyber defense system of Network Box in November 2014, it has been taking care of our cyber defense 24x7. Our IT department can therefore focus with better peace of mind on other important and pressing matters. The Network Box solution is an essential part of our effort to mitigate IT risks and boost operational efficiency.”
